TYPES OF LEARNERS

Student of Denov Institute of Entrepreneurship and Pedagogy

Ruzieva Farangiz

Annotation: Today, the education system is one of the most developed areas. Therefore, learning and teaching is the need of the hour. Everyone knows that everyone learns in different ways. In this article, you will learn about several types of learners. This is how you teach properly.

Key words: Auditory learners, Visual learners, Kinesthetic learners, Reading/writing learners

We all experience the world in unique ways, and with that comes variation in the ways we learn best. Understanding these different types of learning styles can drastically impact the way teachers handle their students, set up group projects and adapt individual learning. Without understanding and acknowledging these different ways of learning, teachers might end up with a handful of students lagging behind their classmates-in part because their unique learning style hasn't been activated.

Part of your responsibility as an educator is to adjust your lessons to the unique group of students you are working with at any given time. The best teachers can cater to each student's strengths, ensuring they are truly grasping the information.

So how do you meet the needs of different types of learners in your class? Join us as we outline the four types of learning styles and how teachers can practically apply this information in their classrooms.

Ways of learning: A closer look at 4 learning styles

Learning styles and preferences take on a variety of forms—and not all people fit neatly into one category. But generally speaking, these are the most common types of learners:

1. Visual learners

How to recognize visual learners in your class: Someone with a preference for visual learning is partial to seeing and observing things, including pictures, diagrams, written directions and more. This is also referred to as the “spatial” learning style. Students who learn through sight understand information better when it's presented in a visual way. These are your doodling students, your list makers and your students who take notes.

How to cater to visual learners: The whiteboard or smartboard is your best friend when teaching these types of learners. Give students opportunities to draw pictures and diagrams on the board, or ask students to doodle examples based on the topic they're learning. Teachers catering to visual learners should regularly make handouts and use presentations. Visual learners may also need more time to process material, as they observe the visual cues before them. So be sure to give students a little time and space to absorb the information.

2. Auditory learners

How to recognize auditory learners in your class: Auditory learners tend to learn better when the subject matter is reinforced by sound. These students would much rather listen to a lecture than read written notes, and they often use their own voices to reinforce new concepts and ideas. These types of learners prefer reading out loud to themselves. They aren't afraid to speak up in class and are great at verbally explaining things. Additionally, they may be slower at reading and may often repeat things a teacher tells them.

How to cater to auditory learners: Since these students generally find it hard to stay quiet for long periods of time, get your auditory learners involved in the lecture by asking them to repeat new concepts back to you. Ask questions and let them answer. Invoke group discussions so your auditory and verbal processors can properly take in and understand the information they're being presented with. Watching videos and using music or audiotapes are also helpful ways of learning for this group.

3. Kinesthetic learners

How to recognize kinesthetic learners in your class: Kinesthetic learners, sometimes called tactile learners, learn through experiencing or doing things. They like to get involved by acting out events or using their hands to touch and handle in order to understand concepts. These types of learners might struggle to sit still and often excel at sports or like to dance. They may need to take more frequent breaks when studying.

How to cater to kinesthetic learners: The best way teachers can help these students learn is by getting them moving. Instruct students to act out a certain scene from a book or a lesson you're teaching. Also try encouraging these students by incorporating movement into lessons: pacing to help memorize, learning games that

involve moving around the classroom or having students write on the whiteboard as part of an activity.

Once kinesthetic learners can physically sense what they're studying, abstract ideas and difficult concepts become easier to understand.

4. Reading/writing learners

How to recognize reading/writing learners in your class: According to the VARK Modalities theory developed by Fleming and Mills in 1992, reading/writing learners prefer to learn through written words. While there is some overlap with visual learning, these types of learners are drawn to expression through writing, reading articles or books, writing in diaries, looking up words in the dictionary and searching the internet for just about everything.

How to cater to reading/writing learners: Of the four learning styles, this is probably the easiest to cater to since much of the traditional educational system tends to center on writing essays, doing research and reading books. Be mindful about allowing plenty of time for these students to absorb information through the written word, and give them opportunities to get their ideas out on paper as well.

Embrace all types of learning

Understanding these different learning styles doesn't end in the classroom. By equipping students with tools in their early years, teachers are empowering them for their futures. Pinpointing how a child learns best can dramatically affect their ability to connect with the topics you're teaching, as well as how they participate with the rest of the class.

Now that you have some tactics in your back pocket to accommodate different ways of learning, you may be curious about classroom management strategies. Learn more in our article, "Proven Classroom Management Tips for Preschool Teachers."

Tips for finding your learning style

There are various ways you can assess your learning abilities and determine what learning style best suits your needs. Here are a few tips to consider when trying to identify your personal learning style:

- ✓ Take an assessment. There are various assessments available online through which you can identify your learning style based on the guidelines of different theories.

✓ Experiment with different learning methods. It may be helpful for you to experiment with learning the same materials through different methods to determine what style best suits your needs.

✓ Reflect on your learning experiences. You can consider your past learning experiences and think about what methods of acquiring knowledge have been most successful for you over time.

✓ Ask your supervisor or instructor for feedback. As a student or professional, you can solicit feedback about your learning style from a supervisor or instructor who may be able to provide insight into your ability to process information.

Learning styles are important in that they allow people to know and gauge forms of mental representations. However, the styles should be perceived as preferences by the learners and not a way of dividing the learners according to their learning capabilities. Learning styles should be used to enlighten the learners about their weaknesses and strengths and those of others. Learning styles should be used hand in hand so as to complement each other.
