

IMPROVING THE SOCIAL-PSYCHOLOGICAL MECHANISMS OF THE INCLUSIVE EDUCATION PROCESS IN GENERAL EDUCATION SCHOOLS.

Himmatova Nodira Normamatovna,

assistant of the Termiz Agrotechnologies and Innovative Development Institute

Abstract: Like every field of education in our country today improvement of the content of special education, innovative practice the issue of introducing technologies is considered urgent. Special education education, upbringing and life of children with developmental problems solves preparation tasks. As you know, one type of development or another organic disorders in brain activity among children with problems As a result, children with certain deviations and deviations in their intellect available, they are educated in specialized educational institutions they get.

Key words: Education, children, disabilities, special education, general education, inclusive education, social segregation, school, disabled people, integrated, gender, general education institutions.

Social protection of children in our country, physical capabilities. The system of providing educational services to disabled persons is perfectly developed

developed. President of the Republic of Uzbekistan "People of the Republic of Uzbekistan on approval of the concept of development of the education system until 2030" Decree No. PF-5712 dated April 29, 2019 and "Special educational needs on measures to further improve the system of education for children with special needs" on October 13, 2020 is one of the promising efforts to help every child find his place in society.

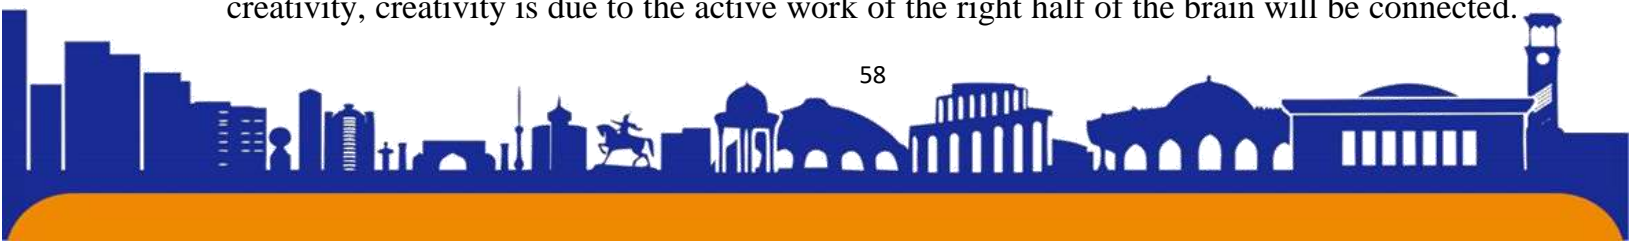

"Special educational needs" adopted by the head of our state "On measures to further improve the system of education for children with special needs" on further improvement of the inclusive education system important in solving problems encountered in practice earns. President Shavkat Mirziyoyev on UN Human Rights. In his speech at the 46th session of the Council, strategic directions, including the disabled special attention to the issue of ratification of the Convention on human rights was directed. There are about 1 billion people with disabilities in the world if we think about its existence, it is an extremely important initiative we will be sure. Measures aimed at wide introduction of the inclusive education system in Uzbekistan, state and non-state organizations on the study of international and national work experiences cooperation projects are being implemented. The possibility of inclusive education general education in the areas where children with disabilities live together with the main curriculum in schools according to their youth, that they receive special education based

on special programs, their peers in class activities means that they participate with.

People with mental development problems today active in various social, economic and cultural relations of society participation, happy marriage and different life in ensuring their effective social adaptation to situations precisely because of its importance among healthy children. The question of involving this category of children in inclusive education is also special from the urgent tasks facing the pedagogy and public education system is being counted. Pedagogical-psychological and organizational of mentally retarded children involvement in appropriate education and social skills in them . Scientific research work, projects on intensive growth is going. Late and slow development of mental processes in mentally retarded children in connection with the appropriate method of determining the duration of their education and tools are chosen. Scientific research conducted in this direction. Our work served to justify the following conclusion. That is inclusive if the educational work in the conditions is also started in families and if continued, the mentally retarded child will be ready for inclusive education and it is new easily adapts to the environment.

Attention is paid to the fact that the processes of education and knowledge are mutually inseparable should be focused. Cognitive activity is the result of the subject activity itself is distinguished by its characteristics, that is, the object, its characteristics, its original being, its essence (the object itself remains unchanged) is its own reflection finds Object modification is important in scientific knowledge is the main condition for understanding its features. This is the process of learning is carried out in subject- knowledge activities that have their own means. The need to acquire new knowledge motivates such activity serves as a motive. And the need to acquire new knowledge other activities (work, play, etc.) are encouraged at the expense of needs. Thus, we develop children with disabilities. What a great and special place mathematics education has in the sensitive era we believe that it holds. About the child's beginnings of mathematics his imagination with the environment, with adults and peers is formed on the basis of systematic knowledge acquired in the process of communication. In the course of our experience, we came to the concept of "systematic knowledge of the child". We rely on and its structure is similar to the structure of theoretical knowledge we consider it as a set of knowledge.

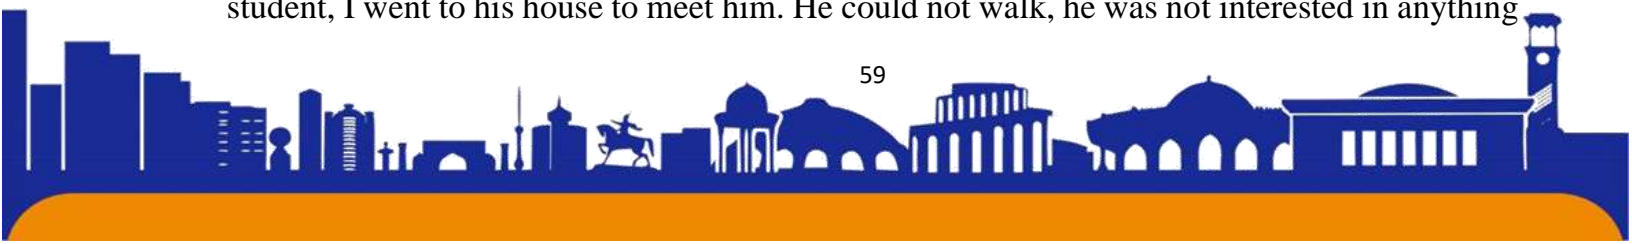

In recent times, the universe, social relations, our values in a time of renewal, we are getting to know a lot of information about indigos and Samo children in public shows and TV programs. It's fresh You may wonder what's wrong with children, but such children their mentality, thinking, attitudes to values are different. They are distinguished by their desire to reign over their desires, that is, their feelings and their own values. Creativity in new children, creativity, creativity is due to the active work of the right half of the brain will be connected.

They don't recognize cazo-kazo, prestige, they are free to choose they obey, they consider themselves equal to everyone. People big and small, career, nationality, it is not interesting for new kids that is, everyone knows that he is Adam. If the new kid is doing something inappropriate, don't ban him. on the contrary, explain that it is not good to do this and recommend another activity eat The new kid needs to stop doing inappropriate work on his own. Persecution is anger in him, instills a sense of self-defense. Terminate your parental rights if you come from above, they will lose their trust in you. If you always resist, enmity arises in the middle. It's better to use your will and do it it's okay to show that you should be. What they saw, not what they were told they believe. The new boy has great inner strength and is good at his duties they know The development of inner knowledge helps to understand others will give. They have a deep understanding of the world in their hearts and can control their emotions. You can't fool them, their inner eyes are watching you. Lie They openly oppose the words of love and feel it. They are doing well it is better to encourage the work and order to switch to another task. Heaven is upon us He sent the Indigos-New Children in trust, so we changed ourselves we must be trustworthy. The main factor in the process of individual training is through hearing is an opportunity to receive a speech. Hearing problems in a deaf child due to its depth, it cannot independently acquire speech. With deaf children on the differentiation of sound vibrations by feeling them through the air bone and by feeling them through the skin- sensation in the corrective exercises is processed. That's why most teachers give sounds to deaf children they rely on skin sense, feel the air when putting.

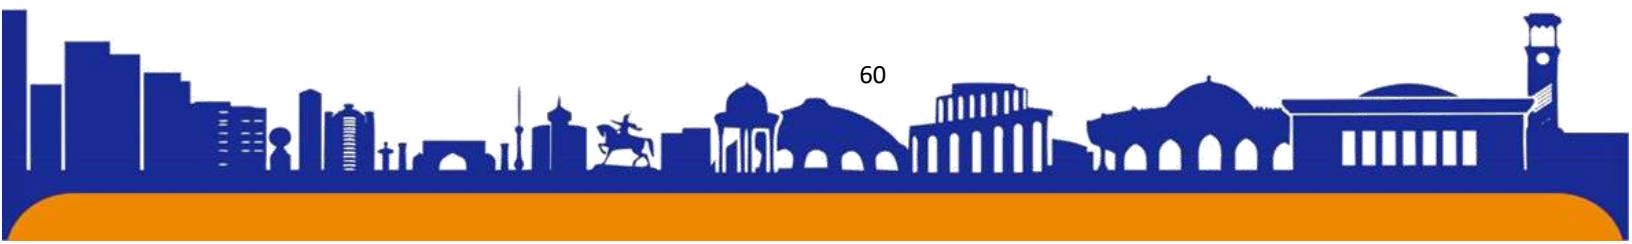

Qualified, highly educated students who receive special education supply of teachers is one of the most urgent problems. Each the teacher to the student who I receiving special education during each lesson with love, to teach him to raise his spirit and each for the child to pass the lesson on the basis of modern information technologies it would be appropriate if separate computers were provided. Inclusive a psychologist in the educational system, giving the student insights into the profession it would be appropriate if the lessons were given. Selected directions As a result of the formation of skills based on knowledge gained fame and good to organize roundtable discussions with successful people I will make an offer. This is a self-taught student He also feels that he belongs to the society. Pupils receiving special education I suggest that the lesson schedule should be changed. That's the suggestion consists of physical education, music, technology, informatics, visual arts I will make a proposal about the introduction of art sciences.

I got to know every student, students with psychological problems. I found out, I found out their interests. Individual arrangement in the 9th grade at school knowing that he has a student, I went to his house to meet him. He could not walk, he was not interested in anything

that gave up hope in life. He himself it was difficult to introduce, and it was found that there were defects in pronunciation. Without much thought, I began to find out what interests him. He said that he is interested in singing, although he struggles with pronunciation. Me by including him in the circle of his peers in whatever activities are held at school, I watched him sing. A child is the greatest blessing for parents. They are only for their children they live for good. Children notice and understand this well and to make good use of the privileges and opportunities created for themselves they act. In this case, the child tends to masculinity and his signs of masculinity are evident in every action he does starts Parents can sometimes say nice, inspiring words. But they always did what they were doing, if they didn't do it themselves regularly If his actions are not worthy of his words, then his pleasant words are not when it does not give a positive result. Nothing for the opposite person, that is, his child will not have a positive effect. The determination of the father, not going back on his word, is important in raising a child have It is necessary for him to always feel this nature of his to his child. The mother and herself on the other hand, this is what the father remembers about the child in such a way, he should prevent his child from doing evil. A parent's own child spiritual nourishment throughout his life, and a healthy worldview in him they don't need to try complicated ways to ensure their formation. There are easy ways to do it. A child who grew up feeling the love of his parents personality, outlook on his future self-confident, independent, hopeful and ensuring that he is lucky has been confirmed in life

In conclusion, every student with disabilities is good life, if there are many people who help him meditate never struggles to find its place. We need them in our society more in the circle of friends who encourage them to feel that they are human should be. We psychologists introduce these above suggestions if it is done, we will have achieved our goal. Another mature to our society, We are proud of our contribution to the delivery of strong personnel. Effective implementation and possibility of inclusive education in our republic identifying convenient ways to adapt disabled children to social life for the purpose of education in special educational institutions is limited children by increasing the effectiveness of involving children in inclusive education studying the possibilities and conditions of involvement in inclusive education. Special in pedagogical-psychological practice of hearing-impaired and visually impaired children Observation of experiences of transfer from 4th-5th grade to general education schools. In this hearing impaired and visually impaired children receive initial education in a special school stage, i.e. acquiring literacy and mastering communication skills then, according to the family's choice, to study together with healthy peers is to be involved.
